

Cholangiography Forceps

The cholangiography forceps are used for intra-operative cholangiography to introduce, correctly position and secure a catheter for intra-operative imaging of the gall bladder or bile duct.

A contrast medium is injected using a cholangiography catheter through the channel of the forceps.

BENEFITS

- Easy catheter insertion with one-piece cannulated shaft
- Tactile feedback for accurate closure around the duct
- Ergonomic and comfortable design
- Single-Use and fully disposable
- Cost effective

FEATURES

- Up to 6Fr Catheter
- 5mm shaft x 33cm length

Single Use Cholangiography forceps completely remove any concerns about reprocessing small channeled instruments.
